Sears craftsman radial arm saw instruction manual

For fellow Woodworkers who need manuals for Craftsman 10 in.radial saw arms. Me and others have sent pdf copies for the following proprietary manuals to this site for your access. ID=222 The website above has these owners manual: Model 103.29310 9 inches Radial saw. Model No. 113.29410 Artisan Accra-Arm 10 inch radial saw. Model 113.29440 Craftsman Accra-Arm 10" Radial Arm Saw 113.23100 10" Radial Arm Saw 113.19760 10" Radiant SawModel 901.23181 Instructions and parts of the radial arm of the model 1 radialarm SawModel 113.197110 10-inch radial arm 10" radial arm radial saw Model No. 113.29411 Artisan Accra-Arm 10 inch Radial Saw. Model 113.29401 10" Good luck Sega radial arm, Walt I just inherited the 10" Craftsman Radial Arm Saw that has never been opened until yesterday - although it was purchased and stayed in the box for more than 14 years! Unfortunately it came only with a manual of the owners FRENCH!!! Does anyone have a copy or do you know where I can have one? I contacted Sears and the OWMM site listed here, but still no luck. I found similar models online but not this particular. I really don't want to have this translated copy as it's more than 88 pgs in length! I hope someone can help!! ps... he also found out he was involved in a call several years ago. I ordered the new parts - I hope they can be provided! The link posted for manuels does not work OldWoodWorkingMachines has recently changed server/code/computer....is still there..... just moved around Go to OWWM and select Craftsman and then the publications and then locate your.....try the link.....scroll down to locate your #.I have a CRAFTSMAN 10 " RADIAL ARM SAW MODEL 113-23100. My problem is that IBy revealing the left and right arms after I transfer the lock to the end of the weapons. Please help. CHET EXPENDITURE Need a manual for the model number 113--190600 Need for a manual for the model number 113.190600 Post a reply like Anonymous Radial Arm Saws are among the most versatile woodworking machines in the workshop. They can be used to cut, tear, cut compound miter, cut dado and rabbets, and more. They can also be among the most dangerous of all woodworking tools. However, taking the appropriate precautions, you can safely use the radial saw arm for numerous activities on your woodworking projects. The first step to work safely with the radial saw is to wear appropriate clothing. Adherent clothes can be caught in your tools or work, which is a very dangerous situation. Part of dressing suitably includes wearing safety glasses and hearing protection. Aeroplane pilots always pass through a pre-flight safety check before take-off, and, like wood, you should always make a pre-cut safety check. This control begins with the reading and understanding of the owner's manual accompanying the radial arm saw. This manual will guide you through the configuration and adjustment of the saw correctly. Then, check the saw blade to make sure it is installed correctly and that it is sharp and relatively clean pitch. At the same time, check to see that all the blade guards are installed and working properly. Your manual should clearly cover this subject. Always wait for the saw to reach the maximum speed before starting the cut, and then turn off the saw after completing the cut. Don't get away from the saw until you gett didn't come to a complete stop. Always keep your piece firmly on the table and against the back fence. Never hand frees a cut on a radial saw. Remove scrap or saw pieces that can prevent cutting before turning the saw on. Cross-cutting on a radial saw can be a bit complicated because the saw blade rotates in the same direction as the cut. As such,needs to pull the saw through the cut, but at the same time, keep the blade to grab and pull the blade through the cut too quickly. This is an even bigger problem when using a blade that is a bit boring or when using a stacked nut set. The saw will cross the wood as quickly as necessary, and the operator must counter this movement by pulling at a slow pace, although at the same time not allowing the saw to push faster than you want. This becomes easier with practice. Many radial saws have a tear-cut function with the saw head turning 90 degrees so that the blade is parallel to the fence. These saws include additional security features to make the rip cut safer. Consult your owner's manual for complete instructions on safe cutting. These additional safety features should include a downward guard on the front of the blade protection, as well as a riving knife and an anti-kickback device on the back of the blade protection. Each of these should be adjusted appropriately for cutting before starting the snatch. The sawing door must also be indicated by the operator. When tearing on a radial arm saw, always hold the piece firmly against the back fence for all length of the cut. The feathers can be a great help with this task. In addition, always use a push stick to drive the card through the tear cut. This stick should be longer than the blade diameter to keep your fingers safe away from the blade. When you tear, be aware that the piece can kick back at any time. The anti-kickback device is designed to help, but, to be sure, avoid being online behind the piece when making the cut. Instead, stayto one side of the piece (which side depends on the fact that you are right or left). If you are standing directly behind the piece during ripping (and relying solely on security features, such as anti-kickback owls), there is a potential for bullet injuries. Standing at the alwill allow any piece that is driven back to fly safely beyond you. When cutting the long pieces, be sure that the end of the piece in front of the side cut is adequately supported at the same height of the radial arm saw table. On long tear cuts, avoid pushing the first half of the cut through the saw and then pull the edge over the blade to complete the second half of the cut. Instead, place the roller support to hold the back end of the stock and push the piece through the entire cut. Cut.
